## 1. INTRODUCTIONS

Welcome to the new period of on the web, decentralized gaming where you own your properties and are not possessed by them, represented by the local area, and upheld by a mind boggling economy where organic market are the best money through a tomfoolery cultivating in-game style.

As information gets significant in the course of our life, decentralization, availability, and responsibility for assets are becoming conceivable through blockchain frameworks. It's significant particularly for players, in the gaming space, to have the option to control what you scarcely won.

Having the likelihood to have a decentralized portrayal of every thing you got in your #1 game to have the option to exchange, hypothesize, trade, store or simply partake in the opportunity of your special and uncommon resources, isn't a fantasy any longer.

# ZEE.EXCHANGE

On ZEE COIN, make today your characters connected straightforwardly on-chain and fabricate it as you like with your own altered interactivity by your picked prepared in your group.

Everything is tradable and replaceable between players, wallet to wallet: you own every thing and in-game property as blockchain ZEE COIN .

In light of a marking framework, you can cultivate with your crypto-companions to redesign your personality and drop ZEE COIN, spells or things in games, in this manner, giving you the likelihood to exchange them for better ones a decentralized way, or in any event, bringing in direct cash through any commercial center!

# ZEE.EXCHANGE

## 2. The Inventory & Gameplay System

On ZEE COIN, all things, spells, and characters are s, and that implies that you can get to them in-game and furthermore on blockchain.

No experience level exists on a person, all things considered, the things that you prepare help to decide the e-force of your personality, it gives greater exhibility for things trades while keeping a levels presences of some sort or another.

No class exists on ZEE COIN, everybody begins with similar possibilities and same bases, you make your own game-style by picking the ZEE COIN you're preparing to play as wish mend...

To have spells and cast them, you will require ZEE COIN token, which are the center of the legend of ZEE COIN, foundable in the Site. By utilizing them and setting them up into your things prepared on your stock.

# ZEE.EXCHANGE

To get that going, you should go to the ZEE COIN town and get to the ZEE COIN , then, at that point, utilize some ZEE COIN token that will be consumed to connect it to an exceptional thing into your stock, you can likewise attempt to update them.

An intelligent guide is accessible at the section of the ZEE COIN game, which prompts various potential ways inside: that give various kinds of and ZEE COIN components with earnings, or direct hard manager with better plunder. The more you plunge into the game, the harder it gets while the plunder is expanding as well.

You can collaborate with companions in gatherings to get into the game and homestead along with them, at a greatest players, it will increment or diminishing the trouble by the quantities of players in the game occasion to keep it fair.

# ZEE.EXCHANGE

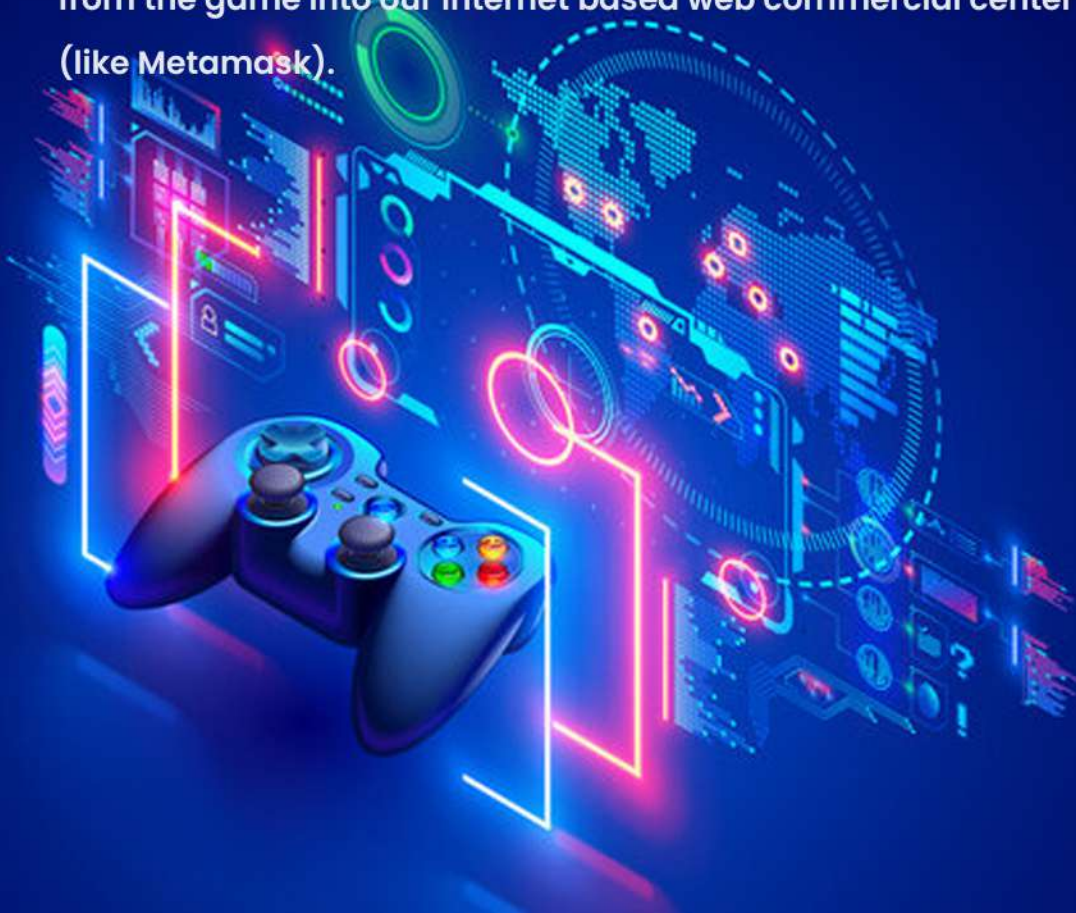

## 3. The Game Economy

While you can appreciate, mess around with your companions playing ZEE COIN games, you can likewise benefit from the Play To Earn insight to win genuine cash, which makes the game considerably really invigorating!

In our reality, there are two monetary standards accessible for use and trades, both tradeable and replaceable on decentralized stages like Uniswap.

The rest one is the ZEE COIN coin which represents ZEE COIN coin, This token sent on the Binance Smart Chain is the base cryptographic money for on-chain installment and exceptional packs, for example, starter packs, unique sell occasions, or trading for the in-game cash ZEE COIN which represents ZEE COIN .

You can likewise utilize the ZEE COIN coin for trading properties (things, ZEE COIN, spells...) from the game into our internet based web commercial center utilizing your Wallet (like Metamask).

# ZEE.EXCHANGE

Sovereign of Riches (ZEE COIN ) is the in-game cash, globe-trotters like you can acquire it in all level, it comes in many structures with the super utility you can use for it is to exchange it with resembles the vendor or to put it in the Bank.

You can dominate ZEE COIN tokens in-match by cultivating, trading from companions, through certain missions; by in game, and giving prizes. Later on, you will have the likelihood to stake into the Bank in-game to benefit from marking prizes with a net APY each year which will have different in-game circumstances to take part.

You can exchange your things and different merchandise utilizing the ZEE COIN coin, and that implies that you can play, drop some game, guess, and win genuine cash from it. Sovereign of Riches are jewels that contain supernatural influence giving you admittance to certain spells powers equipable on your games, which are sellable to on the Marketplace.

# ZEE.EXCHANGE

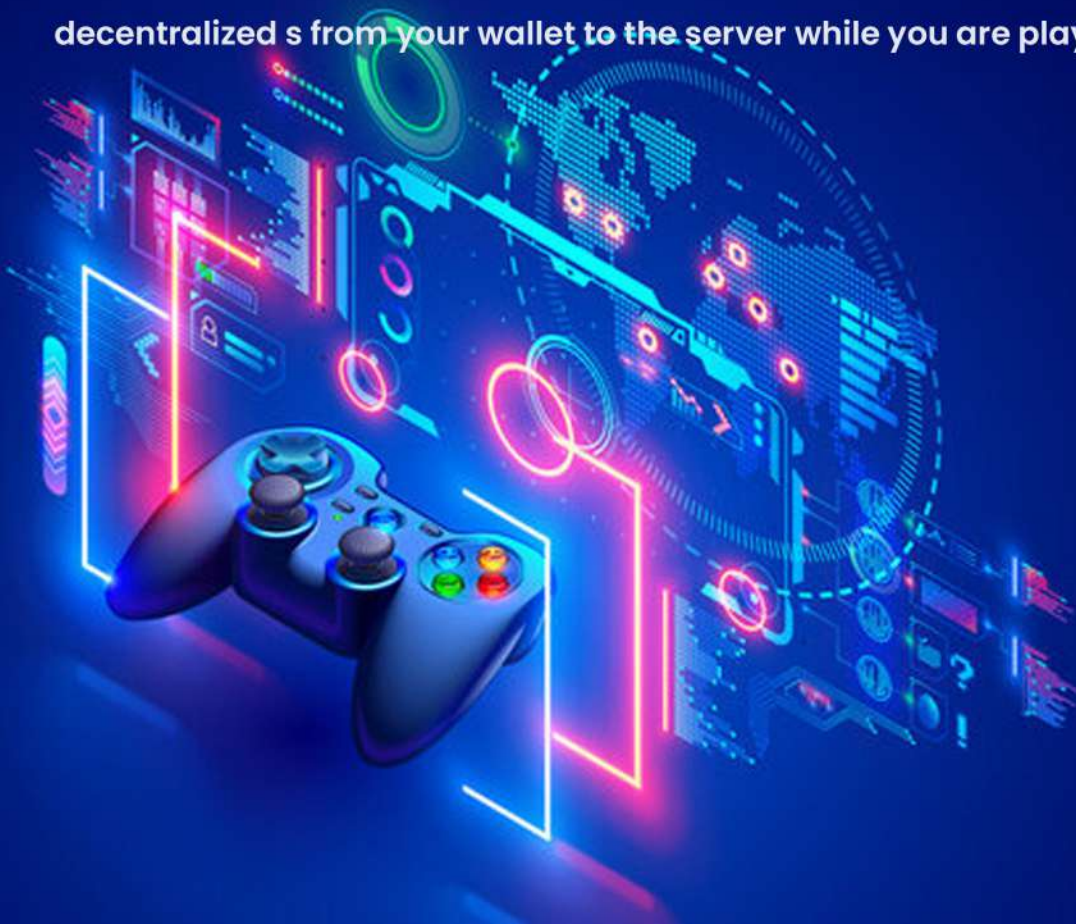

## 4. The Technicals

Sovereign of Riches world is joined with blockchain to enable the openness and the responsibility for's information/objects.

To play on ZEE COIN, you will require an Ethereum-based wallet utilizing a program expansion like Metamask, by signing in with your wallet through a computerized crypto-signature, you will approve yourself on-chain and into the game, subtleties are accessible on ZEE COIN docs for novices.

The client to play is created and kept up with the Unity game engine\* and go through our internet based site utilizing the WebGL technology\* with low-polygon design\* style to guarantee a versatile web-based program game.

It works with a concentrated and a decentralized gateway. First, to login and interface with the ZEE COIN World, a back-end game server modified in C# language\* spans your decentralized s from your wallet to the server while you are playing.

# ZEE.EXCHANGE

Then an API\* makes the passage interface between your wallet and the server. Every one of your characters, spells, things, ZEE COIN are addressed in both s and on our concentrated ACID database\* with the goal that you can involve them in-game and improve/alter them.

While interfacing with your wallet to the game, you are diverted through a intermediary server\* to an exceptional string process instance\* of the game hall (the ZEE COIN city on which you bring forth); you can then make bunches with your companions and join the game to ghts - > another occasion generate to deal with your exercises, ghts.

At the point when you disengage from the web-based ZEE COIN in-game world, you can pull out the entirety of your assets in structures that are communicated and sent by our back-end system\*, hence giving all the influence of unified administration for the game and the decentralization opportunity of your in-game properties that you will claim for a lifetime.

# ZEE.EXCHANGE

## 5. The Tokenomics

As we have one monetary standard, one for in-game named ZEE COIN (ZEE COIN) and one principal token for on-chain movement ZEE COIN coin (ZEE COIN), we really want a few solids tokenomics to have a year's versatile game to guarantee an in-game and o - game rich economy.

The ZEE COIN coin has an max supply of 500000000 ZEE COIN coins, As point by point underneath, our tokenomics are very unambiguous and fixed.

The pre-sale phase introduces a novel twist with the distribution of 2 crore coins, branching off from the original 50 crore coin concept.

The ZEE COIN coin (ZEE COIN ) is the web-based cash to play, purchase, exchange, and have new internet based stuffs in the ZEE COIN world, as it conveys more gamble and financial moves, it requirements to have a colossal stock so every player can have some to play with.

## 7. The ZEE COIN Roadmap

# ZEE.EXCHANGE

## 8. The Team Behind ZEE COIN

On ZEE COIN, we have an enormous group with experience in a few spaces: Our CEO has currently effectively begun ventures and business around the crypto-world and have a particular thought of how game on blockchain with 's will have a serious effect in the entire gaming industry in the following couple of years.

With respect to our CTO, he is working formally as an accomplished computer programmer at the Unity game motor organization, which makes him truly significant and a strong development capability of our game, additionally opportunities for the whole group to do anything that we at any point longed for, on ZEE COIN.

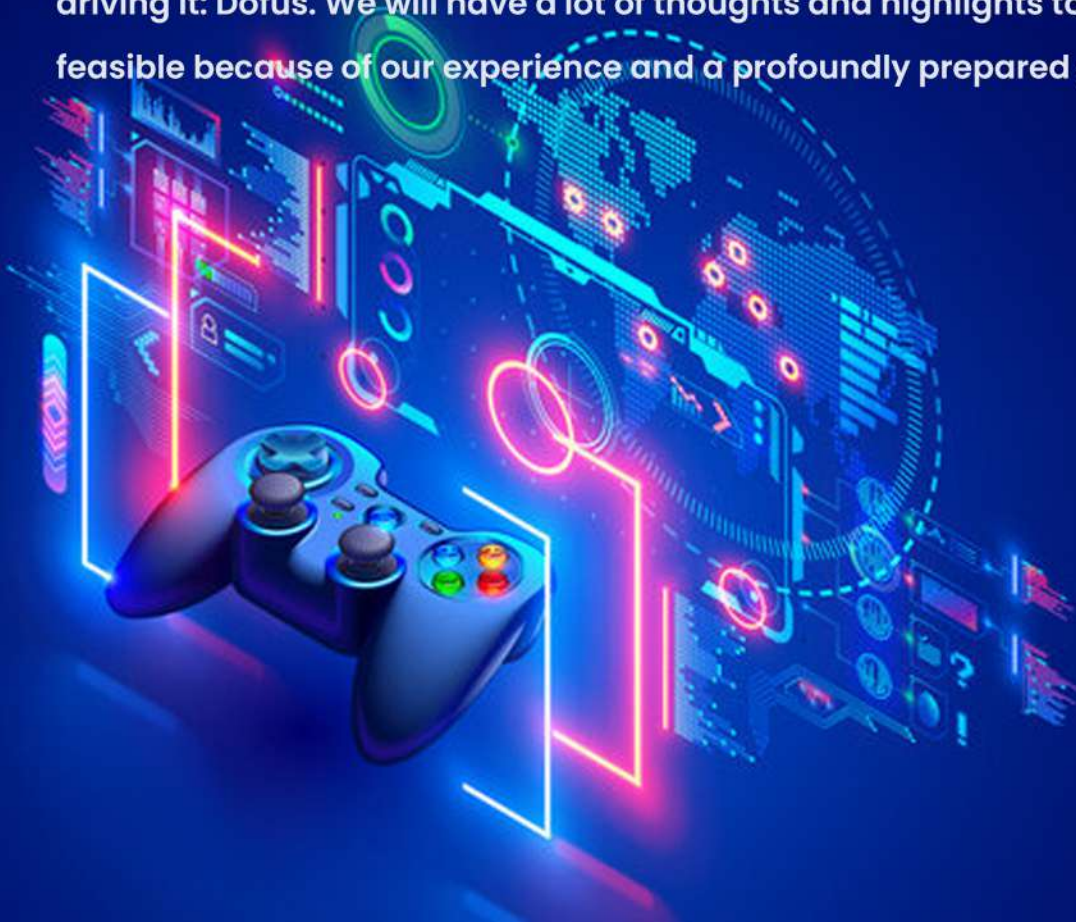

# ZEE.EXCHANGE

We are a group of eight software engineers, designers that generally had a good time playing a ton of games, for example, busting, and we are completely inspired by the crypto-business: we see the capability of information and highlights that can be fabricated utilizing blockchain, so we needed to make our own reality!

Concerning our plan, model and representation, we have three gifted craftsmen to make explicit undertakings: character configuration, painting and 3D modelization; things; and furthermore client experience or things, for example, site marking, design, and ZEE COIN 2D pictures.

They likewise have experience involving the Unity motor for making our level-plan and game items, subsequently, we will have the chance with our engineers to develop, add highlights en route, and the creative mind that accompanies our craftsmen!

For our situation, legend and story, spells, playability, plan of cultivating.. we have a capable game originator that got the opportunity to work in Ankama office, which is quite possibly of the greatest game maker in the European business with the French game driving it: Dofus. We will have a lot of thoughts and highlights to add into our game, feasible because of our experience and a profoundly prepared group on those spaces.

## 9. Technical architecture – BINANCE TECHNOLOGY

Binance is a cryptocurrency exchange that offers a trading platform for a variety of digital currencies. It was established in 2017 and has its headquarters in the Cayman Islands. In terms of daily trading volume, Binance is presently the largest exchange in the world. Changpeng Zhao, a developer who had previously designed high-frequency trading software, launched Binance. Binance was founded in China, but due to the country's increasing regulation of cryptocurrencies, it relocated its headquarters to the United States. Most blockchains are designed as a decentralized database that functions as a distributed digital ledger. These blockchain ledgers record and store data in blocks, which are organized in a chronological sequence and are linked through cryptographic proofs.

# ZEE.EXCHANGE

## 9. Technical architecture – BINANCE TECHNOLOGY

The creation of blockchain technology brought up many advantages in a variety of industries, providing increased security in trustless environments. However, its decentralized nature also brings some disadvantages. For instance, when compared to traditional centralized databases, blockchains present limited efficiency and require increased storage capacity.

### Advantages

**Distributed**–Since blockchain data is often stored in thousands of devices on a distributed network of nodes, the system and the data are highly resistant to technical failures and malicious attacks.

# ZEE.EXCHANGE

## 9. Technical architecture – BINANCE TECHNOLOGY

### Advantages

Each network node is able to replicate and store a copy of the database and, because of this, there is no single point of failure a single node going offline does not affect the availability or security of the network. In contrast many conventional database rely on a single or few servers and are more reversed, meaning that once data has been registered into the blockchain,

it is extremely difficult to remove or change it. This makes blockchain a great technology for storing financial records or any other data where an audit trail is required because every change is tracked and permanently recorded on a distributed and public ledger.

# ZEE.EXCHANGE

## 9. Technical architecture – BINANCE TECHNOLOGY

### Advantages

For example, a business could use blockchain technology to prevent fraudulent behavior from its employees. In this scenario, the blockchain could provide a secure and stable record of all financial transactions that take place within the company. This would make it much harder for an employee to hide suspicious transactions. Trustless system- In most traditional payment systems,

Transactions are not only dependent on the two parties involved, but also on an intermediary – such as a bank, credit card company, or payment provider. When using blockchain technology, this is no longer necessary because the distributed network of nodes verify the transactions through a process known as mining.

# ZEE.EXCHANGE

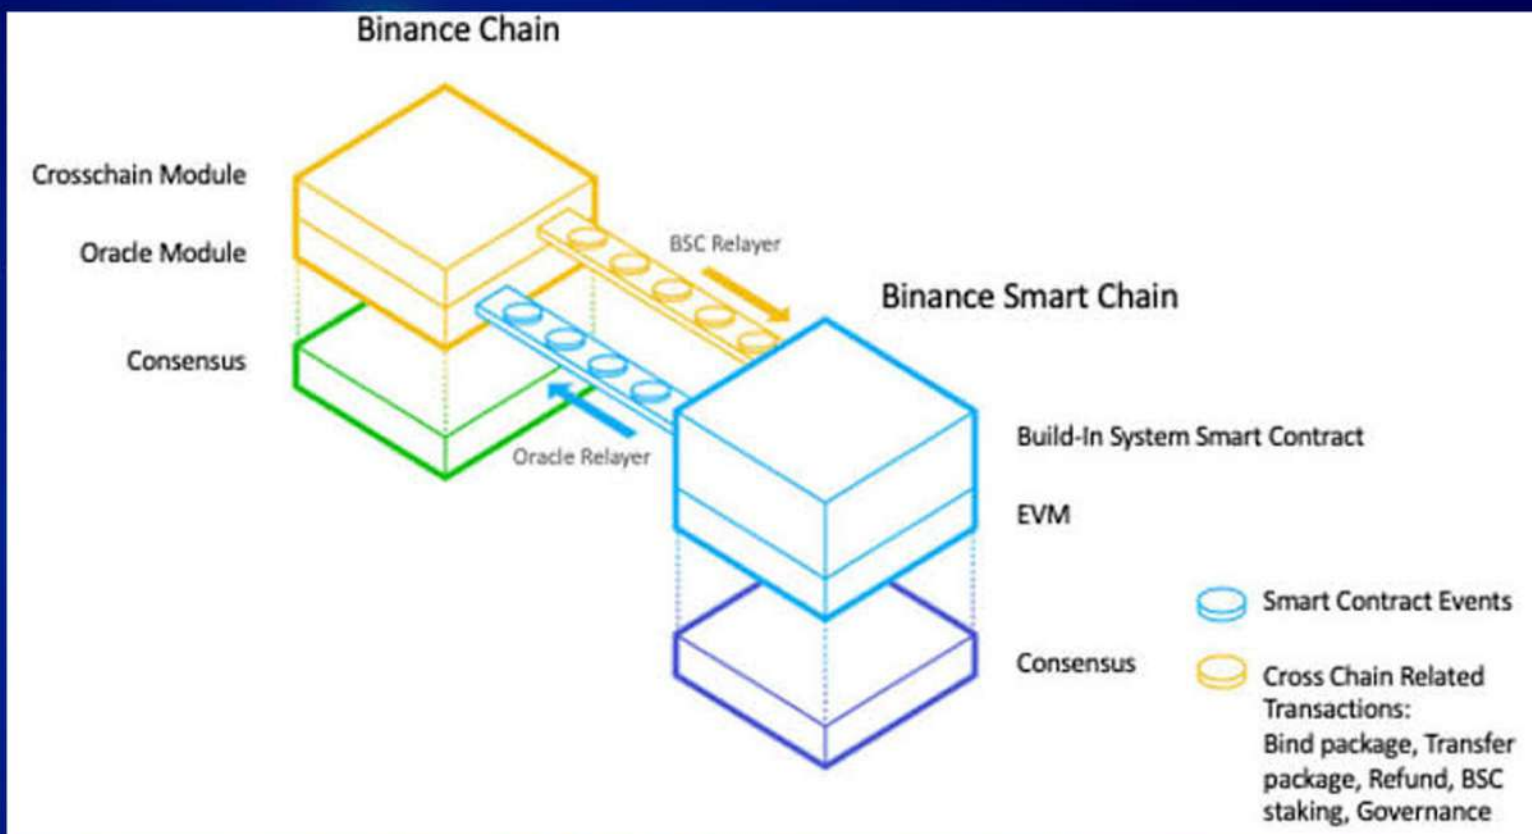

## 9. Technical architecture – BINANCE TECHNOLOGY

### Advantages

For this reason, Blockchain is often referred to as a 'trustless' system. Therefore, a blockchain system negates the risk of trusting a single organization and also reduces the overall costs and transaction fees by cutting out intermediaries and third parties.

You could create a native asset as a BEP-20 token and even peg tokens from other blockchains in order to make them usable on the = Binance Smart Chain.

Creating a BSC token is easy, and the tokens conform to a standard which is known as BEP20, which ensures basic functionality for the token, such as transferring, returning a balance, viewing the token ownership, and so on

## 10. VERSION OF WHITEPAPER

This version of the white paper, as well as future editions, can be amended at any moment. This edition of the white paper, as well as any future versions, may be modified at any moment. There are no rights that may be derived from the information provided in this White Paper. We're heading into the future with the promise of more engaging and innovative entertainment, higher financing for education, training, and service, more motivated workers, and more competitive businesses with flatter organisational frameworks and modern business models.

# ZEE.EXCHANGE

## 11. The ZEE COIN Conclusion

Sovereign of Riches intends to be a creative 3D on the web, helpful game working with blockchain and utilizing the crypto economy, while players can claim their products, bringing in cash while messing around with trade and exchange between clients generally existed on ZEE COIN.

It was previously, disallowed or even in the end got restricted on a standard game (for instance site to purchase computerized game monetary standards): presently you can utilize crypto-framework to get it going in a solid manner.

Utilizing s and decentralized convention, an entirely different approach to doing games and communications between players accompany it, which is truly energizing, we want to make it more standard so enormous enterprises see the potential in the innovation like us and make the following decentralized game universe of tomorrow.
